

# Modular Conveyor System

## Designed for product coding or labelling

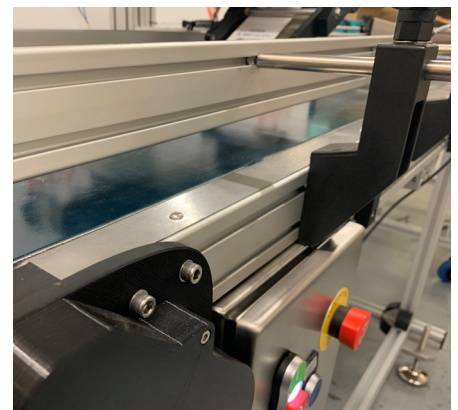

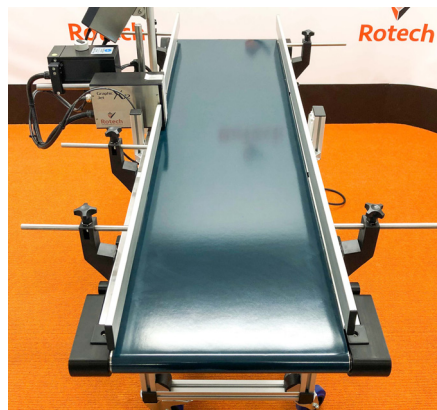

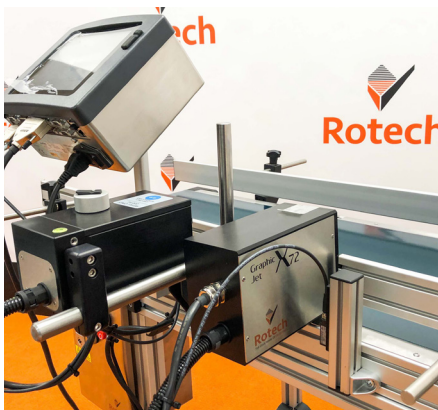

Designed and built in our UK Factory we can supply a range of system lengths from 0.75m up to 3m in increments of 0.5m. Interface Controls can be mounted to suit either Left or Right-handed operation.

Ideal for use as a transport mechanism for various size and shape of product, when integrated with our Outer Case or Thermal Inkjet Printer, it provides a simple to use, efficient and reliable print solution. We can also integrate Print and Apply or Label only heads to provide a simple on/off-line automated labelling solution.

Our modular design means that systems can be interlinked to cater for bespoke applications.

Accurate product tracking is achieved using a combination of easy-adjust guide rails (available in both flat and round profile) and innovative self-tracking belt.

# RT Range

## RT150+

### TECHNICAL SPECIFICATIONS

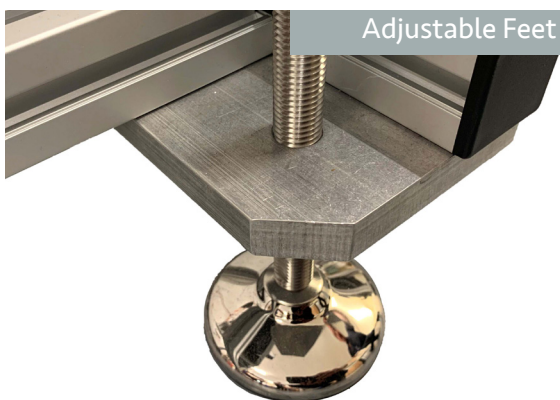

|                  |  |
|------------------|--|
| Conveyor Lengths | Custom lengths in increments of 500mm. (0.75 - 3.0 Metres) |
| Guide Rails      | Square or round guide rails                                |
| Speed            | Option of variable or fixed speed control                  |
| Belt Width       | Standard width- 385 MM                                     |

Lockable Castor Wheels

Adjustable Feet

## Key benefits

- Systems can be interlinked for bespoke applications
- Range of drive systems to suit speed and load requirements
- Stable, smooth operation
- Self-aligning belt
- Available with feet or castors
