

## Rotech Seiko X72

Large area inkjet printer, ideal for high-resolution printing up to 72mm on to primary and secondary packaging

The Rotech Seiko X72 uses unique FREEFLOW™ technology - an open and non-pressurised ink tank system. This completely removes the need for expensive, moving parts like pumps and valves, bringing the following benefits:

- ✓ Reliable, cost-effective and maintenance-free
- ✓ The printhead's lifespan is up to 6 times longer than systems that used a pressurised ink feed
- ✓ Completely unaffected by harsh or changing production environments

### COMPATIBLE WITH ALL SOFTWARE AND ERP SYSTEMS

Where other printers only work with their own brand of software, we leave the choice of software completely up to you.

In essence, the Rotech Seiko X72 is an industrial PC with a printhead. Because of this, any imaginable software, connector or communication protocol is compatible and 100% industry 4.0 ready.

The use of free label design and management software on the 20cm touchscreen controller is totally optional, allowing you to choose the software and machine control method that is best suited to your particular application.

### TECHNICAL SPECIFICATIONS

Printhead	Seiko 510BN
Print height	72mm
Print resolution	180 DPI
Drop size	50 Picolitre
Max. print speed	45m/min
Ink tank capacity	400ml
Omnidirectional print direction	180 degrees
Available inks	Oil-based (mineral-free) & solvent
Controller Tsc20	20cm Touchscreen + Windows OS
